DUEL FUEL SCISSOR LIFTS

Duel fuel lifts are suited for both indoor and outdoor use as they can be run on gas or propane. The benefit of a duel fuel lift is that they are able to alternate between running on propane for indoor applications and gasoline for outdoor use. All outdoor lifts are 4x4 rough terrain and some are available with outriggers for unstable/non-level surfaces. All of our rough terrain lifts are equipped with extension decks.

ELECTRIC SCISSOR LIFTS

Electric scissor lifts are run on batteries making them suitable for indoor use as they are free of emissions. These type of lifts are used for slab applications on concrete floors, pavement, or any other hard level/compacted surfaces. With having white, non-marking tires, these lifts can be versatile for use in shopping malls, tile floors, carpeted surfaces, and other commercial applications. With a 32" width, these lifts are able to fit through most conventional 7-foot tall door-ways. All electric lifts come with an extension deck.
